

Chase Farm Hospital

Devon Ward

This project involves the rebuild of facilities within Devon Ward. (We have completed a number of similar jobs for Enfield NHS trust in the last few years) The contract is worth £80k for the design and installation of a new ventilation system, including heat recovery, air conditioning and cleaning plant. New plumbing is to be connected to the hospital's existing system. With just a Two week lead in time, we have been using our expertise in fast-track planning and supervision, and have had to make connections to existing occupied areas, without inconveniencing staff and patients.
