

Sir James Hawkey Hall

We have recently completed this challenging job which has honed our staff and management skills.

The community hall had an unreliable heating and hot water system which was disrupting the busy function schedule. Our task was to strip out the old system and install a completely new boiler plant within 4 days, ready for a function. Space limitations did not allow packaged pre-fabricated plant, so we assembled and installed new high efficiency Broag boilers, flues, controls, pumps and pipework. Our contract value was £50k and was successfully completed on time and to the delight of the client. Our reputation received a boost, as the system proved beyond the clients dreams.
